## Stainless steel

A favourite among professional chefs, stainless steel is strong, hardwearing, heat-resistant and doesn't stain or corrode. It's easy to clean with any stainless steel cleaner available from your supermarket, but always wipe dry to prevent smearing. Worktops can be made with very few joins, creating a seamless look. Remember to use a chopping board and take care moving things across the surface as it is likely to scratch. However, scratches won't interfere with its anti-bacterial properties.
